

ABSTRACT

The invention realizes a quick and inexpensive translation service in many languages by means of a single Web site (firmware) on a communication network.

In order to perform a quick translation in many languages requested through a communication network, the invention has been composed so that a multilingual translation Web site apparatus 2 functioning as a Web site (firmware) consisting of one apparatus and one translation processing system receives language data of a subject of translation from a translation requester apparatus 4.

The multilingual translation Web site apparatus 2 changes its processing form adaptively to the language of the subject of translation received, and automatically selects language data for translation. A translator apparatus 3 performs translation of the language data received from the multilingual translation Web site apparatus 2. The multilingual translation Web site apparatus 2 receives and enters the translated data from the translator apparatus 3 into the multilingual processing database, and automatically changes its processing form of translation adaptively to the language after translation, and enables the translation requester apparatus 4 to receive the translated data.
